

REVERSING CAMERA SYSTEM WITHOUT VIDEO CABLES!

For use with most Brigade Vehicle CCTV systems.*

General Specifications

Transmitter/Receiver

Video input/output	1.0Vp-p, 75
Power input	12-24Vdc
Power output	12Vdc
Power consumption	80mA @ 24Vdc
Operating temperature	-20°C to +60°C
Weight	290g ~ 250g
Size (mm) (w x h x d)	160 x 65 x 25
Waterproof	IP67(transmitter)

Brigade Electronics plc

The benefits to you of Pulse;

- Saves costly and time consuming fitment of cables and other connectors, up to 3 hours for an articulated truck.
- No need for additional susie cables and associated maintenance costs.
- Removes risk of incorrect susie socket plug connections.
- Can be temporarily fitted to short term lease or spot hire vehicle.

*Not shutter or tilt cameras - VBV systems will need adaptor cables

Reversing CCTV system - without video cables.

Pulse PLC-1000, better than wireless! Removes the need to run a camera cable between the camera and the monitor, whilst still maintaining the security and quality of a hard-wired connection!

The camera is connected to the existing reversing light power circuit via the PLC transmitter box, and the monitor is connected to the reverse light circuit in the cab via the PLC receiver box, replacing the camera cable.

How it works...

The transmitter compresses, codes, and transmits the camera images – as a modulated wave signal – along the existing power lines on the vehicle to be decoded and decompressed by the receiver. The result is perfect pictures without the time consuming fitment of cables and other connectors.

Wide range of vehicles...

Pulse will work on vehicles or machines that have a live power feed at the camera location, including trucks, buses, coaches, caravans, forklift trucks, telescopic handlers, etc. A real benefit for all vehicle operators – and completely revolutionary for those that operate articulated trucks and draw-bar trailers!!

Pulse is designed to be fitted to conventional single wire lighting or power circuits. Please refer to installation guide or consult Brigade Technical on 01322 420347 for suitability on all other wiring systems*.

Avoids possible damage to exposed cabling

No additional susie cable to fit

Quick and convenient reversing safety

Better visibility without expensive extended cabling

- * Shutter and tilting lens cameras will not function with this system
- * Adaptors required for use with VBV series systems
- * Not to be used in conjunction with CAN body bus or body multiplex systems
