

AC-24-12(010) (5907)

Mercedes Actros/Arocs (with J9P Prep) Adapter Cable

FITTING NOTES

- This adapter cable is for Mercedes vehicles with suitable J9P prep only. Refer to manufacturers' guidelines for other models.
- The J9P equipment integrates up to four analogue video cameras on the secondary display. When reverse gear is engaged, camera 1 can be triggered.
- Each of the four cameras and the reverse trigger must be activated using the Mercedes XENTRY diagnosis software. All other functions prioritise over camera views. Only camera 1 can be triggered by reverse. Cameras are unavailable above 8mph.
- Terminals to be inserted into X43 plug (Mercedes P/N: A1685450928) **not supplied**.
- Terminals to be inserted in appropriate plug housing position (see X43 pin locations table below). Terminals must 'click' in place.
- Failure to insert terminals in correct positions could lead to device failure or damage.
- Brigade accepts no liability for subsequent damage due to incorrect installation.
- Refer to latest revision of Brigade Electronics Engineering Drawing BE-004211-XX-19 for further details.

Note: Due to the specification of the Mercedes system, full camera image quality may not be seen on the manufacturers display. For optimal camera performance use a Brigade monitor.
