

**To ensure an IP66-rated seal please follow these instructions:**

#1 Having finalised the viewing angle of the camera, screw down the inner ring (c.) while manually pressing the sphere onto the rear O-ring (a.) (This will also help when loosening the inner ring).

#2 Replace the clear polycarbonate dome (d.) Fully loosen the locking grub screw (f.) then screw down the outer flange (e.), while pressing dome (d.) onto the front O-ring (b.)

# 3 Use template provided for drilling fixing holes for flush mount, surface or angled mount.

**The seal is effected when the O-rings are both compressed.**

Please note: Failure to observe this guideline could allow ingress of moisture into the enclosure which can seriously damage the camera. For best results apply silicon sealant to the O-rings.
